

Who is your IT Hero?

IT Heroes are always there making sure your business-critical technology is delivered without interruption. So go about your business with confidence...we've got your back.

Empowering Business. Approachable Technology.

em•pow•er (verb) – To give power or authority to. To enable.
ap•proach•a•ble (adjective) – Accessible. Easy to meet, know, talk with.

Real Solutions Stories

Virtualization

- Server Consolidation
- Storage Optimization
- Cloud Readiness
- Virtual Desktop
- Off-site Productivity

A regional healthcare system's tale of cost savings, enabled growth and competitive edge

The Plot: With their backs against a wall of maxed out infrastructure, this rapidly-growing organization faced regulatory compliance penalties and steep upgrades to HVAC and power supplies.

The Rescue: InfoSystems stepped in with a virtualization solution allowing the organization to do more with less, reducing cooling and power demand while building in ample room for future growth. Operating costs were lowered and compliance issues resolved...everyone loves a happy ending.

Backup & Disaster Recovery

- Backup and Restore
- On Site / Off Site Solutions
- High Availability
- Deduplication
- Storage Management

A national retail chain's tale of increased productivity and disaster-proofing

The Plot: After years of steady growth, a legacy backup-to-tape solution was the culprit behind incomplete backups that pushed into the following day. Without intervention the company was facing the potential that the backup system could disrupt warehouse productivity and lead to the inability to replenish store inventory levels.

The Rescue: InfoSystems saved the day with a backup system that runs smoothly during non-productive hours, cutting backup time from 18 to six hours – removing the "Iron Mountain" of tapes with tiered storage – and a true off-site replication solution with a deduplication ratio of 10:1.

Hardware Optimization

- Leverage Existing Investments
- Network Design
- Upgrades and Compatibility
- Dynamically Allocate Resources
- Lower Total Cost of Ownership

A major restaurant chain's tale of lower IT staffing demands and increased return on existing investments

The Plot: With a growing infrastructure of 75 underutilized servers that created havoc for a small IT staff, this company was out of space and over-worked, with more sprawl on the horizon.

The Rescue: InfoSystems created a virtualization solution for both application servers and storage servers that resulted in a one-third reduction in energy consumption and increased IT personnel productivity, thanks to centralized management of the servers and storage.

A financial institution's tale of regulatory compliance and increased productivity through advanced communications

The Plot: The company was paralyzed with fear at the thought of trying to upgrade internal phone systems while maintaining compliance with strict banking laws that protect sensitive information.

The Rescue: InfoSystems implemented a five-location IP phone system with a private internal network that is completely scalable and easily maintained. The employees can now communicate faster and easier, delivering better performance for their employer without jeopardizing security.

A regional nonprofit service organization's tale of enhanced member service, significant cost savings and streamlined job performance

The Plot: The Nonprofit was overburdened with maintaining a 300+ page website that members relied on as a crucial resource. Each page was custom built, inconsistently designed and had to be painstakingly managed by a single employee who was being deployed to Afghanistan.

The Rescue: InfoSystems developed a whiz-bang new self-hosted Share-Point 2010 internet site that uses the universal Microsoft Office platform to add and update content. The site has both public-facing and members-only sections so that documents, charts, graphs and other information can be shared securely. The site is so user-friendly that website management is a shared responsibility and no longer demands specialized skills from an individual employee. The organization said goodbye to the expensive hosting fees and the constant need to pay a premium for simple web content updates.

What's an IT Hero without a league of Super Heroes?

No IT Hero flies solo. At InfoSystems we take our vendor relationships seriously so that when the opportunity arises we can step into the spotlight, deliver the technology solution and save the day—which usually means big ROI payoff in the form of cost savings, new revenue opportunities or the competitive edge to take the next big step.

By partnering with the greatest technology brands the world has ever known, we make sure our employees have the best tools and the right certifications to supercharge their skills and abilities. We invest in our people so that our people can deliver for your business.
